Volume 278

## Series Editor

Janusz Kacprzyk, Systems Research Institute, Polish Academy of Sciences,  
Warsaw, Poland

## Advisory Editors

Fernando Gomide, Department of Computer Engineering and Automation—DCA,  
School of Electrical and Computer Engineering—FEEC, University of Campinas—  
UNICAMP, São Paulo, Brazil

Okyay Kaynak, Department of Electrical and Electronic Engineering,  
Bogazici University, Istanbul, Turkey

Derong Liu, Department of Electrical and Computer Engineering, University  
of Illinois at Chicago, Chicago, USA; Institute of Automation, Chinese Academy  
of Sciences, Beijing, China

Witold Pedrycz, Department of Electrical and Computer Engineering,  
University of Alberta, Alberta, Canada; Systems Research Institute,  
Polish Academy of Sciences, Warsaw, Poland

Marios M. Polycarpou, Department of Electrical and Computer Engineering,  
KIOS Research Center for Intelligent Systems and Networks, University of Cyprus,  
Nicosia, Cyprus

Imre J. Rudas, Óbuda University, Budapest, Hungary

Jun Wang, Department of Computer Science, City University of Hong Kong,  
Kowloon, Hong Kong

The series “Lecture Notes in Networks and Systems” publishes the latest developments in Networks and Systems—quickly, informally and with high quality. Original research reported in proceedings and post-proceedings represents the core of LNNS.

Volumes published in LNNS embrace all aspects and subfields of, as well as new challenges in, Networks and Systems.

The series contains proceedings and edited volumes in systems and networks, spanning the areas of Cyber-Physical Systems, Autonomous Systems, Sensor Networks, Control Systems, Energy Systems, Automotive Systems, Biological Systems, Vehicular Networking and Connected Vehicles, Aerospace Systems, Automation, Manufacturing, Smart Grids, Nonlinear Systems, Power Systems, Robotics, Social Systems, Economic Systems and other. Of particular value to both the contributors and the readership are the short publication timeframe and the world-wide distribution and exposure which enable both a wide and rapid dissemination of research output.

The series covers the theory, applications, and perspectives on the state of the art and future developments relevant to systems and networks, decision making, control, complex processes and related areas, as embedded in the fields of interdisciplinary and applied sciences, engineering, computer science, physics, economics, social, and life sciences, as well as the paradigms and methodologies behind them.

Indexed by SCOPUS, INSPEC, WTI Frankfurt eG, zbMATH, SCImago.

All books published in the series are submitted for consideration in Web of Science.

# Welcome Message of CISIS-2021 International Conference Organizers

Welcome to the 15th International Conference on Complex, Intelligent and Software Intensive Systems (CISIS-2021), which will be held from July 1 to July 3, 2021, at Soon Chun Hyang (SCH) University, Asan, Korea, in conjunction with the 15th International Conference on Innovative Mobile and Internet Services in Ubiquitous Computing (IMIS-2021).

The aim of the conference is to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ICT-enabled applications: software intensive systems, complex systems and intelligent systems.

Software intensive systems are systems, which heavily interact with other systems, sensors, actuators, devices, other software systems and users. More and more domains are involved with software intensive systems, e.g., automotive, telecommunication systems, embedded systems in general, industrial automation systems and business applications. Moreover, the outcome of web services delivers a new platform for enabling software intensive systems. The conference is thus focused on tools, practically relevant and theoretical foundations for engineering software intensive systems.

Complex systems research is focused on the overall understanding of systems rather than its components. Complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions. They evolve and adapt through internal and external dynamic interactions.

The development of intelligent systems and agents, which is each time more characterized by the use of ontologies and their logical foundations, builds a fruitful impulse for both software intensive systems and complex systems. Recent research in the field of intelligent systems, robotics, neuroscience, artificial intelligence and cognitive sciences is a very important factor for the future development and innovation of software intensive and complex systems.

The CISIS-2021 is aiming at delivering a forum for in-depth scientific discussions among the three communities. The papers included in the proceedings cover all aspects of theory, design and application of complex systems, intelligent systems and software intensive systems.

We are very proud and honored to have two distinguished keynote talks by Dr. Jayh (Hyunhee) Park, Myongji University, Korea, and Dr. Antonio Esposito, University of Campania “Luigi Vanvitelli”, Italy, who will present their recent work and will give new insights and ideas to the conference participants.

The organization of an international conference requires the support and help of many people. A lot of people have helped and worked hard to produce a successful CISIS-2021 technical program and conference proceedings. First, we would like to thank all the authors for submitting their papers, the program committee members and the reviewers who carried out the most difficult work by carefully evaluating the submitted papers. We are grateful to Honorary Co-Chairs Kyoil Suh, Soon Chun Hyang (SCH) University, Korea, and Prof. Makoto Takizawa, Hosei University, Japan, for their guidance and advices.

Finally, we would like to thank Web Administrator Co-Chairs for their excellent and timely work.

We hope you will enjoy the conference proceedings.

# Organization

## CISIS-2021 Organizing Committee

### Honorary Co-chairs

Kyoil Suh	Soonchunhyang University, Korea
Makoto Takizawa	Hosei University, Japan

### General Co-chairs

Kangbin Yim	Soonchunhyang University, Korea
Tomoya Enokido	Rissho University, Japan
Marek Ogiela	AGH University of Technology, Poland

### Program Committee Co-chairs

Jonghyouk Lee	Sejong University, Korea
Antonio Esposito	University of Campania “Luigi Vanvitelli”, Italy
Omar Hussain	University of New South Wales, Australia

### International Advisory Board

David Taniar	Monash University, Australia
Minoru Uehara	Toyo University, Japan
Arjan Durrezi	IUPUI, USA
Beniamino Di Martino	University of Campania “L. Vanvitelli”, Italy

### Award Co-chairs

Akio Koyama	Yamagata University, Japan
Kin Fun Li	University of Victoria, Canada
Kiwoong Park	Sejong University, Korea
Olivier Terzo	LINKS Foundation, Italy

## **International Liaison Co-chairs**

Wenny Rahayu	La Trobe University, Australia
Fumiaki Sato	Toho University, Japan
Flora Amato	University of Naples Federico II, Italy

## **Publicity Co-chairs**

Nadeem Javaid	COMSATS University Islamabad, Pakistan
Takahiro Uchiya	Nagoya Institute of Technology, Japan
Markus Aleksy	ABB AG Corporate Research Center, Germany
Farookh Hussain	University of Technology Sydney, Australia

## **Finance Chair**

Makoto Ikeda	Fukuoka Institute of Technology, Japan
--------------	--

## **Local Arrangement Co-chairs**

Seongkeun Park	Soonchunhyang University, Korea
Kyuhaeng Lee	Soonchunhyang University, Korea
Taeyoon Kim	Soonchunhyang University, Korea

## **Web Administrator Chairs**

Phudit Ampririt	Fukuoka Institute of Technology, Japan
Kevin Bylykbashi	Fukuoka Institute of Technology, Japan
Ermioni Qafzezi	Fukuoka Institute of Technology, Japan

## **Steering Committee Chair**

Leonard Barolli	Fukuoka Institute of Technology, Japan
-----------------	--

## **Track Areas and PC Members**

### **1. Database and Data Mining Applications**

#### **Track Co-chairs**

Kin Fun Li	University of Victoria, Canada
Pavel Krömer	Technical University of Ostrava, Czech Republic

#### **PC Members**

Antonio Attanasio	Links Foundation, Italy
Tibebe Beshah	Addis Ababa University, Ethiopia

Jana Heckenbergerova	University of Pardubice, Czech Republic
Konrad Jackowski	Wroclaw University of Technology, Poland
Petr Musílek	University of Alberta, Canada
Aleš Zamuda	University of Maribor, Slovenia
Genoveva Vargas-Solar	French Council of Scientific Research, LIG-LAFMIA, France
Xiaolan Sha	Sky, UK
Kosuke Takano	Kanagawa Institute of Technology, Japan
Masahiro Ito	Toshiba Lab, Japan
Watheq ElKharashi	Ain Shams University, Egypt
Mohamed Elhaddad	University of Victoria, Canada
Wei Lu	Keene State College, USA

## 2. Artificial Intelligence and Bio-inspired Computing

### Track Co-chairs

Hai Dong	Royal Melbourne Institute of Technology, Australia
Salvatore Vitabile	University of Palermo, Italy
Urszula Ogiela	Pedagogical University of Krakow, Poland

### PC Members

Kit Yan Chan	Curtin University, Australia
Shang-Pin Ma	National Taiwan Ocean University, Taiwan
Pengcheng Zhang	Hohai University, China
Le Sun	Nanjing University of Information Science and Technology, China
Sajib Mistry	Curtin University, Australia
Klodiana Goga	Istituto Superiore Mario Boella, Italy
Vincenzo Conti	University of Enna Kore, Italy
Minoru Uehara	Toyo University, Japan
Philip Moore	Lanzhou University, China
Mauro Migliardi	University of Padua, Italy
Dario Bonino	CHILL, Italy
Andrea Tettamanzi	University of Nice, France
Cornelius Weber	Hamburg University, Germany
Tim Niesen	German Research Center for Artificial Intelligence (DFKI), Germany
Rocco Raso	German Research Center for Artificial Intelligence (DFKI), Germany
Fulvio Corno	Politecnico di Torino, Italy

### 3. Multimedia Systems and Virtual Reality

#### Track Co-chairs

Yoshinari Nomura	Okayama University, Japan
Santi Caballé	Open University of Catalonia, Spain
Shinji Sugawara	Chiba Institute of Technology, Japan

#### PC Members

Shunsuke Mihara	Lockon Inc., Japan
Shunsuke Oshima	Kumamoto National College of Technology, Japan
Yuuichi Teranishi	NICT, Japan
Kazunori Ueda	Kochi University of Technology, Japan
Hideaki Yanagisawa	National Institute of Technology, Tokuyama College, Japan
Kaoru Sugita	Fukuoka Institute of Technology, Japan
Keita Matsuo	Fukuoka Institute of Technology, Japan
Santi Caballé	Open University of Catalonia, Spain
Nobuo Funabiki	Okayama University, Japan
Yoshihiro Okada	Kyushu University, Japan
Tomoyuki Ishida	Fukuoka Institute of Technology, Japan
Nicola Capuano	University of Basilicata, Italy
Jordi Conesa	Universitat Oberta de Catalunya, Spain
Farzin Asadi	Kocaeli University, Kocaeli, Turkey
David Gañan	Universitat Oberta de Catalunya, Spain
Le Hoang Son	Vietnam National University, Vietnam
Jorge Miguel	Grupo San Valero, Spain
David Newell	Bournemouth University, UK

### 4. Next Generation Wireless Networks

#### Track Co-chairs

Marek Bolanowski	Rzeszow University of Technology, Poland
Andrzej Paszkowski	Rzeszow University of Technology, Poland
Sriram Chellappan	Missouri University of Science and Technology, USA

#### PC Members

Yunfei Chen	University of Warwick, UK
Elis Kulla	Okayama University of Science, Japan
Admir Barolli	Aleksander Moisiu University, Albania
Makoto Ikeda	Fukuoka Institute of Technology, Japan
Keita Matsuo	Fukuoka Institute of Technology, Japan
Shinji Sakamoto	Seikei University, Japan

Omer Wagar	University of Engineering & Technology, Poland
Zhibin Xie	Jiangsu University of Science and Technology, China
Jun Wang	Nanjing University of Post and Telecommunication, China
Vamsi Paruchuri	University of Central Arkansas, USA
Arjan Durrezi	IUPUI, USA
Bhed Bista	Iwate Prefectural University, Japan
Tadeusz Czachórski	Polish Academy of Sciences, Poland

## 5. Semantic Web and Web Services

### Track Co-chairs

Antonio Messina	Istituto di Calcolo e Reti ad Alte Prestazione CNR, Italy
Ilona Bluemke	Warsaw University of Technology, Poland
Natalia Kryvinska	Comenius University in Bratislava, Slovakia

### PC Members

Alba Amato	Italian National Research Center (CNR), Italy
Nik Bessis	Edge Hill University, UK
Robert Bestak	Czech Technical University in Prague, Czech Republic
Ivan Demydov	Lviv Polytechnic National University, Ukraine
Marouane El Mabrouk	Abdelmalek Essaadi University, Morocco
Corinna Engelhardt-Nowitzki	University of Applied Sciences, Austria
Michal Gregus	Comenius University in Bratislava, Slovakia
Jozef Juhar	Technical University of Košice, Slovakia
Nikolay Kazantsev	National Research University, Russia
Manuele Kirsch Pinheiro	Université Paris 1 Panthéon Sorbonne, France
Cristian Lai	CRS4 Center for Advanced Studies, Italy
Michele Melchiori	University of Brescia, Italy
Giovanni Merlino	University of Messina, Italy
Kamal Bashah Nor Shahniza	Universiti Teknologi MARA, Malaysia
Eric Pardede	La Trobe University, Australia
Aneta Poniszewska-Maranda	Lodz University of Technology, Poland
Pethuru Raj	IBM Global Cloud Center of Excellence, India
Jose Luis Vazquez Avila	University of Quintana Roo, México
Salvatore Venticinque	University of Campania “Luigi Vanvitelli”, Italy
Anna Derezińska	Warsaw University of Technology, Poland

## 6. Security and Trusted Computing

### Track Co-chairs

Hiroaki Kikuchi	Meiji University, Japan
Omar Khadeer Hussain	University of New South Wales (UNSW) Canberra, Australia
Lidia Fotia	University of Calabria, Italy

### PC Members

Saqib Ali	Sultan Qaboos University, Oman
Zia Rehman	COMSATS University Islamabad, Pakistan
Morteza Saberi	University of New South Wales (UNSW) Canberra, Australia
Sazia Parvin	University of New South Wales (UNSW) Canberra, Australia
Farookh Hussain	University of Technology Sydney, Australia
Walayat Hussain	University of Technology Sydney, Australia
Sabu Thampi	Indian Institute of Information Technology and Management - Kerala (IIITM-K) Technopark Campus, India
Sun Jingtao	National Institute of Informatics, Japan
Anitta Patience Namanya	University of Bradford, UK
Smita Rai	Uttarakhand Board of Technical Education Roorkee, India
Abhishek Saxena	American Tower Corporation Limited, India
Ilias K. Savvas	University of Thessaly, Greece
Fabrizio Messina	University of Catania, Italy
Domenico Rosaci	University Mediterranea of Reggio Calabria, Italy
Alessandra De Benedictis	University of Naples “Frederico II”, Italy

## 7. HPC and Cloud Computing Services and Orchestration Tools

### Track Co-chairs

Olivier Terzo	Links Foundation, Italy
Jan Martinovič	IT4Innovations National Supercomputing Center, VSB Technical University of Ostrava, Czech Republic
Jose Luis Vazquez-Poletti	Universidad Complutense de Madrid, Spain

### PC Members

Alberto Scionti	Links Foundation, Italy
Antonio Attanasio	Links Foundation, Italy
Jan Platos	VŠB-Technical University of Ostrava, Czech Republic

Rustem Dautov	Kazan Federal University, Russia
Giovanni Merlino	University of Messina, Italy
Francesco Longo	University of Messina, Italy
Dario Bruneo	University of Messina, Italy
Nik Bessis	Edge Hill University, UK
MingXue Wang	Ericsson, Ireland
Luciano Gaido	Istituto Nazionale di Fisica Nucleare (INFN), Italy
Giacinto Donvito	Istituto Nazionale di Fisica Nucleare (INFN), Italy
Andrea Tosatto	Open-Xchange, Germany
Mario Cannataro	University “Magna Græcia” of Catanzaro, Italy
Agustin C. Caminero	Universidad Nacional de Educación a Distancia, Spain
Dana Petcu	West University of Timisoara, Romania
Marcin Paprzycki	Systems Research Institute, Polish Academy of Sciences, Poland
Rafael Tolosana	Universidad de Zaragoza, Spain

## 8. Parallel, Distributed and Multicore Computing

### Track Co-chairs

Eduardo Alchieri	University of Brasilia, Brazil
Valentina Casola	University of Naples “Federico II”, Italy
Lidia Ogiela	Pedagogical University of Krakow, Poland

### PC Members

Aldelir Luiz	Catarinense Federal Institute, Brazil
Edson Tavares	Federal University of Technology—Parana, Brazil
Fernando Dotti	Pontificia Universidade Catolica do Rio Grande do Sul, Brazil
Hylson Neto	Catarinense Federal Institute, Brazil
Jacir Bordim	University of Brasilia, Brazil
Lasaro Camargos	Federal University of Uberlandia, Brazil
Luiz Rodrigues	Western Parana State University, Brazil
Marcos Caetano	University of Brasilia, Brazil
Flora Amato	University of Naples “Federico II”, Italy
Urszula Ogiela	Pedagogical University of Krakow, Poland

## 9. Energy Aware Computing and Systems

### Track Co-chairs

Muzammil Behzad	University of Oulu, Finland
Zahoor Ali Khan	Higher Colleges of Technology, United Arab Emirates

### PC Members

Naveed Ilyas	Gwangju Institute of Science and Technology, South Korea
Muhammad Sharjeel Javaid	University of Hafr Al Batin, Saudi Arabia
Muhammad Talal Hassan	COMSATS University Islamabad, Pakistan
Waseem Raza	University of Lahore, Pakistan
Ayesha Hussain	COMSATS University Islamabad, Pakistan
Umar Qasim	University of Alberta, Canada
Nadeem Javaid	COMSATS University Islamabad, Pakistan
Yasir Javed	Higher Colleges of Technology, UAE
Kashif Saleem	King Saud University, Saudi Arabia
Hai Wang	Saint Mary's University, Canada

## 10. Complex Systems, Software Modeling and Analytics

### Track Co-chairs

Lech Madeyski	Wroclaw University of Science and Technology, Poland
Bigumiła Hnatkowska	Wroclaw University of Science and Technology, Poland
Yogesh Beeharry	University of Mauritius, Mauritius

### PC Members

Ilona Bluemke	Warsaw University of Technology, Poland
Anna Bobkowska	Gdańsk University of Technology, Poland
Anna Derezińska	Warsaw University of Technology, Poland
Olek Jarzębowicz	Gdańsk University of Technology, Poland
Mirosław Ochodek	Poznań University of Technology, Poland
Michał Śmiałek	Warsaw University of Technology, Poland
Anita Walkowiak-Gall	Wroclaw University of Science and Technology, Poland
Zbigniew Huzar	Wroclaw University of Science and Technology, Poland
Robert T. F. Ah King	University of Mauritius, Mauritius

## 11. Multi-agent Systems, SLA Cloud and Social Computing

### Track Co-chairs

Giuseppe Sarnè	Mediterranean University of Reggio Calabria, Italy
Douglas Macedo	Federal University of Santa Catarina, Brazil
Takahiro Uchiya	Nagoya Institute of Technology, Japan

### PC Members

Mario Dantas	Federal University of Juiz de Fora, Brazil
Luiz Bona	Federal University of Parana, Brazil
Márcio Castro	Federal University of Santa Catarina, Brazil
Fabrizio Messina	University of Catania, Italy
Hideyuki Takahashi	Tohoku University, Japan
Kazuto Sasai	Ibaraki University, Japan
Satoru Izumi	Tohoku University, Japan
Domenico Rosaci	Mediterranean University of Reggio Calabria, Italy
Lidia Fotia	Mediterranean University of Reggio Calabria, Italy

## 12. Internet of Everything and Machine Learning

### Track Co-chairs

Omid Ameri Sianaki	Victoria University, Sydney, Australia
Khandakar Ahmed	Victoria University, Australia
Inmaculada Medina Buló	Universidad de Cádiz, Spain

### PC Members

Farhad Daneshgar	Victoria University, Sydney, Australia
M. Reza Hoseiny F.	University of Sydney, Australia
Kamanashis Biswas (KB)	Australian Catholic University, Australia
Khaled Kourouche	Victoria University, Sydney, Australia
Huai Liu, Lecturer	Victoria University, Australia
Mark A. Gregory	RMIT University, Australia
Nazmus Nafi	Victoria Institute of Technology, Australia
Mashud Rana	CSIRO, Australia
Farshid Hajati	Victoria University, Sydney, Australia
Ashkan Yousefi	Victoria University, Sydney, Australia
Nedal Ababneh	Abu Dhabi Polytechnic, Abu Dhabi, UAE
Lorena Gutiérrez-Madroñal	University of Cádiz, Spain
Juan Boubeta-Puig	University of Cádiz, Spain

Guadalupe Ortiz  
 Alfonso García del Prado  
 Luis Llana

University of Cádiz, Spain  
 University of Cádiz, Spain  
 Complutense University of Madrid, Spain

# **CISIS-2021 Keynote Talks**

# Asking AI Why: Explainable Artificial Intelligence

Jayh (Hyunhee) Park

Myongji University, Yongin, Korea

**Abstract.** In the early phases of AI adoption, it was okay to not understand what the model predicts in a certain way, as long as it gives the correct outputs. Explaining how they work was not the first priority. Now, the focus is turning to build human interpretable models. In the invited talk, I will explain why explainable AI is important. Then, I will explain an AI model. Through this invited talk, I will discuss models such as ensembles and neural networks called black-box models. I will deal with the following questions.

- Why should we trust your model?
- Why did the model take a certain decision?
- What drives model predictions?

# Coevolution of Semantic and Blockchain Technologies

Antonio Esposito

University of Campania “Luigi Vanvitelli”, Aversa, Italy

**Abstract.** Semantic technologies have demonstrated to have the capability to ease interoperability and portability issues in several application fields such as cloud computing and the Internet of things (IoT). Indeed, the increase in resource representation and the inference capabilities enabled by semantic technologies represent important components of current distributed software systems, which can rely on better information interoperability and decision autonomy. However, semantics alone cannot solve trust and reliability issues that, in many situations, can still arise within software systems. Blockchain solutions have shown to be effective in this area, creating data sharing infrastructure where information validation can be done without the necessity of third-party services. A coevolution and integration of semantic and blockchain technologies would at the same time enhance data interoperability and ensure data trust and provenance, creating undeniable benefits for distributed software systems. This talk will focus on the current state of the art regarding the integration of semantic and blockchain technologies, looking at the state of their coevolution, at the available and still needed solutions.

**Abstract.** This study aims to analyze the effect of environmental performance announcements on shareholder value and how environmental disclosures mediate this relationship. The companies studied included 81 companies listed on the Indonesia Stock Exchange (IDX) in 2017–2019. Researchers determine the sample using purposive sampling, with the criteria 1) manufacturing companies that issue financial reports. 2) manufacturing companies that follow PROPER. 3) manufacturing companies that publish environmental disclosures in Sustainability Reporting. The results showed that the first hypothesis, namely the announcement of environmental performance has a positive effect on environmental disclosure, is accepted. Furthermore, the second hypothesis is that environmental performance announcements have no effect on shareholder value, and the third hypothesis is that environmental disclosure has a positive effect on shareholder value.

## 1 Introduction

Environmental issues have become an important topic in today's global economy. Corporate goals and responsibilities have begun to shift from focusing on profit to companies that care for the environment and society to maximize corporate value. Company value can be achieved by increasing the share price, thereby it will increase the prosperity of the owner [1]. One of the positive assessments from stakeholders is the announcement of a company that cares about the environmental performance around the company. The announcement is in the form of environmental performance announcements for companies participating in the Company Performance Assessment in Environmental Management (PROPER). PROPER will be notified to the public every year. This announcement can improve the company's reputation [2]. Announcement of environmental performance leads to a more thorough understanding of a company's environmental activities and their disclosures [3]. Companies announced by the Ministry of Environment to have PROPER especially for their good environmental performance will inform extensive environmental disclosures. The market reaction will be

better for companies with good environmental performance announcements than companies with the poor environmental performance [4]. The results of research that have been conducted by [5–8] indicate that environmental performance announcements affect the extent of corporate environmental disclosure. However, research by [9] has had the opposite result. On the other hand, [10, 11] explains the existence of value creation for shareholders for social and environmental concerns with performance announcements and environmental disclosures. Shareholders will participate in increasing the value of the company's shares because the company maintains the environment well [12]. [13] explained that the implementation of environmental policies has a relationship with shareholder value but only under certain conditions. If the performance and environmental disclosures cannot maximize shareholder value, then the incentives issued include waste for the company. [14] showed that corporate social responsibility has an effect on firm value. The inconsistency of previous research makes the relationship between environmental performance announcements and shareholder value uncertain, whether environmental performance announcements are an aspect that can increase or even decrease company shareholder value.

Legitimacy theory implies that a function of the high intensity of stakeholder expectations of the company's environmental performance has an impact on the legitimacy that ensures the sustainability of company's business [15]. The company's environmental disclosure becomes a tool to obtain and maintain the company's legitimacy status to stakeholders [16]. Signal theory suggests that companies with superior environmental performance have an incentive to disclose superior company performance and choose to mark company achievements by publishing sustainable ESG reports in addition to mandatory financial reports [17]. Signaling theory refers to the ability to communicate with all stakeholders, where companies consistently make environmental disclosures and announcements of sustainability performance signifying them as good corporate citizens. To maintain the financial and non-financial performance that affects increasing stakeholder value [17], this is a reflection of how the company should behave.

[11] explains environmental disclosure information as a form of transparency in the business sector regarding the company's environmental activities and shows the company's concern and responsibility in front of shareholders so that the preservation of the surrounding environment will build a good legitimacy for companies related to increasing stakeholder value. Environmental disclosure is an important aspect for company management and investors [10]. In line with the above research, [7] and [18] state that disclosure of the company's environment provides additional information for external parties about the company's environmental performance and the development of company greenhouse gas emission information. In doing so, it allows analyst and investors to better assess and increase the visibility of their shareholder value. This study tries to find that environmental disclosure can mediate the effect of environmental performance announcements on stakeholder values. Variations in environmental disclosure transparency can explain the increase in stakeholder expectations and are relevant to the formation of an image of shareholder value [19]. It is intended that the company makes environmental performance announcements to improve the company's reputation.

## 2 Theoretical and Hypothesis Development

This study proposes the disclosure of environmental performance to mediate the effect of environmental performance on company shareholder value. The announcement of the company's environmental performance by the Ministry of Environment can show that the company is proactive in giving the impression of good management of the environment. This opportunity can be used by companies to publish parts of company activities that meet the wishes of stakeholders in terms of environmental programs, which will further increase the value of the company's shareholders [20].

### 2.1 Environmental Performance Announcement and Environmental Disclosures

Companies with high environmental performance announcements will be credible and broader in delivering environmental disclosures. In this case, the company will still get legitimacy and a longer going concern because the community will be more accepting of the company's existence [21, 22]. This shows the positive effect of environmental performance announcement on the level of environmental disclosure. [5, 6, 21] have similar research results that company's environmental performance announcement has a positive effect on environmental disclosure.

H1: Environmental performance announcements have a positive effect on the company's environmental disclosures

### 2.2 Environmental Performance Announcement and Shareholder Value

The presence of companies that participate in PROPER aims to improve environmental performance and environmental disclosure. In this case, the better the company improves its performance announcements, the better the reputation of all stakeholders will be increased [23]. This statement is supported by [24] which states that companies that receive good environmental performance announcements from third parties will get response from investor through an increase in the company's stock price and long-term company earnings. Through the announcement of environmental performance, it contains information that is relevant to achieving good communication for many stakeholders that the company has a concern for environmental programs. [21] explained that environmental disclosure can increase customer and employee satisfaction which then has an impact on shareholder value creation. This reflects that good corporate value will reflect the creation of good shareholder value as well [25]. [26] and [27] showed that environmental performance announcements increase the shareholder value of the company.

H2: Environmental performance announcements have a positive effect on shareholder value

### 2.3 Environmental Disclosure and Shareholder Value

In company's environmental reporting, companies can be consistent and proactive to meet stakeholder expectations [11]. It can make a good impression by publishing parts

of the company’s environmental operations such as energy and emissions, waste data, environmental initiatives, and environmental policies, environmental capital expenditures that will have a direct impact on the company’s future cash flows and the risks associated with the company’s holding value [28]. Disclosure of information about the company’s concern for the environment is carried out because indirectly this will become a consideration for investors and creditors on the company’s credibility [15]. In empirical research, [29, 30] states that stocks perform better in terms of stock returns which have a positive relationship with the disclosure of the company’s environment. Companies make environmental disclosures as an environmental responsibility to create shareholder value, this is in line with the results of research by [3, 10, 11]. Environmental disclosures create relevant value through their direct impact on the cost of capital or value.

H3: Environmental disclosure has a positive effect on shareholder value

### 3 Methodology

#### 3.1 Sample

**Population and Sample.** The population in this study were all manufacturing companies in Indonesia. This research sample used purposive sampling. Based on the availability of annual reports that are listed on the IDX or the company website, the samples used were 81 companies from 2017 to 2019 (Table 1).

**Table 1.** Variable measurement

Variable	Measurement	
Environmental performance announcements	The average score of PROPER achieved by each company	[2]
Shareholder value	$PBV = \frac{\text{Stock price}}{\text{Share Book value}}$	
Environmental disclosures	$IEs\ index = \frac{\sum(\text{itemdisclose} \times IER' \text{ indexscore})}{\text{Total items}}$	[18]

The average of shareholder value (SV) is 2,96. The average value of the company’s environmental performance announcement is 3. While the company’s environmental disclosure score is 1.71 (Table 2).

#### 3.2 Data Analysis

For data analysis, this study used SPSS in the form of simple linear regression analysis.

## 4 Results

### 4.1 Descriptive Statistic

**Table 2.** Descriptive statistic

	N	Minimum	Maximum	Mean	St. deviation
SV	81	.207	9.465	2.96460	2.454547
EP	81	2.00	4.000	3.00000	.474342
ED	81	.003	5.110	1.71698	1.256533

### 4.2 The Results of Hypothesis Testing

The Kolmogorov-Smirnov test results show the Asymp. Sig. value that is more than 0.05, namely 0.200 for model 1 and 0.063 for model 2. This shows that model 1 and model 2 in this study have a regression model with a normal distribution. The heteroscedasticity test shows a number above 0.05 so that model 1 and model 2 have no heteroscedasticity. Furthermore, the results of the Durbin-Watson value for model 1 lie between  $du < d < 4-du = 1,664 < 1,764 < 2,336$ , while model 2 is  $1,689 < 1,771 < 2,310$ . It means, the two models do not have autocorrelation. The F-test value in model 1 is 106,942 and model 2 is 2334,633 (Tables 3 and 4).

**Table 3.** Hypothesis testing model 1

Model	Heteroscedasticity	Unstandardized	T	Sig.
		B		
(Constant)		-4,310	-7,306	,000
KL	,106	,066	,620	,537

Normality Test Statistic 0,080. Asymp. Sig. (2-tailed) 0,200. Durbin- Watson 1,764. F test 106,942. R Square 0,575. Adjusted R Square 0,570

**Table 4.** Hypothesis testing model 2

Model	Heteroscedasticity	Unstandardized	T	Sig.
		B		
(Constant)		-3,200	-,822	,414
KL	,071	-,027	-,373	,710
PL	,027	,045	1,658	,101

Normality Test Statistic 0,096. Asymp. Sig. (2-tailed) 0,063. Durbin- Watson 1,771. F test 2334,633. R Square 0,984. Adjusted R Square 0,983

Meanwhile, the value of R-Square for model 1 is 57.5% and model 2 is 98.4%. This means that in model 1, environmental performance announcement affects environmental disclosure by 57.5% and the remaining 42.5% is influenced by other variables. Whereas in model 2, environmental performance announcements and environmental disclosures affect shareholder value by 98.4%, and the remaining 1.6% is influenced by other variables.

**Table 5.** T-test model 1

Model	T	Sig.
KL	10,341	,000

**Table 6.** T-test model 2

Model	T	Sig.
KL	-,412	,682
PL	44,851	,000

Based on Table 5, the effect of environmental performance announcements on environmental disclosures shows the t-value of 10.341 with a significance of 0.000, less than 0.05. This means that the first hypothesis which stated that the environmental performance announcements have a positive effect on environmental disclosure, is accepted.

Meanwhile, based on Table 6, environmental performance announcement on shareholder value shows a negative t-value of 0.412 with a significance value of 0.682, greater than 0.05. This means that the second hypothesis which states that environmental performance announcements do not affect shareholder value, is accepted. Furthermore, the effect of environmental disclosure on shareholder value shows a t-value of 44.851 and a significance value of 0.000, less than 0.05. This shows that the third hypothesis that environmental disclosure on shareholder value, is accepted.

## 5 Discussion and Conclusion

This study examines how the environmental performance announcement strategy affects the level of corporate stakeholder value through environmental disclosure. An analysis by [31] shows that the extent of environmental disclosure is the creation of a shareholder image carried out by disseminating credible information about the company's environmental performance which can increase or decrease the image of shareholders in the company (industry). This shows that companies with good environmental performance announcements will convey more information in their disclosures to get legitimacy so that the company's sustainability will last much longer [21, 22]. This explanation is in line with the results of the study by [5, 6].

The results of the second hypothesis analysis, environmental performance announcements do not affect shareholder value. For investors, companies with high environmental performance announcements do not guarantee that a company can provide benefits for investors. Because this activity requires a large allocation of resources and investors have to increase the investment cost which can conflict to maximize shareholder value [17]. [32] and [17] prove that companies that announce environmental performance need higher incentives that will affect the response of investors in providing investments that will affect the income and image of stakeholders. Furthermore, environmental disclosure will increase production costs and thereby reduce profitability [9]. The results of this analysis contradict to the study of [26, 27].

The results of the analysis of the third hypothesis, namely the disclosure of the company's environment affect the increase in shareholder value. This result is in line with research from [18], that environmental disclosure provides an assessment of relevant information related to information desired by investors that will increase shareholder value by facilitating information on predictions of future financial performance or even reducing the cost of capital [29]. [3] also showed that environmental disclosures can be used as a management tool to create organizational pressure and incentives to encourage action to reduce greenhouse gas emissions. Thus, environmental disclosure significantly affects company's value. This is consistent with the legitimacy theory, which suggests companies disclose more environmental information that can increase the company's credibility and shareholder value.
